Bank Customer Dataset for Personal Loan Prediction

Dataset Title: Anonymized Loan Applications USA_ETL

Local File Name: bank_personal_loan_data.csv

Source / Repository: Mendeley Data

Dataset Type: Structured tabular dataset

File Format: CSV

Domain: Banking / Personal Loans / Customer Analytics

Geographical Context: USA

Dataset Description:

This dataset contains demographic, financial, and behavioral information for 5,000 bank customers, collected as part of a marketing campaign for personal loan offers. The main aim is to predict whether a customer accepted the loan offer, represented by the target variable Personal Loan.

The dataset consists of 13 input features and 1 target variable. The features include attributes such as age, income, credit card usage, education level, mortgage value, and account ownership details, while the target variable indicates whether the customer accepted the personal loan offer.

Dataset Variables Description:

Column	Meaning	Data Type
ID	Unique customer identifier	Integer
Age	Customer age in years	Integer
Experience	Years of professional experience	Integer
Income	Annual income	Numeric
